ABSTRACT OF DISCLOSURE

An image photographing apparatus includes a body, on which a tape cassette is removably mounted, and a camera unit installed in the body and provided with a plurality of camera sections. The camera sections have different pixel numbers and the camera sections are independently driven. The image photographing apparatus also includes a mode sensing unit to sense a photographic mode to correspond to at least one of the camera sections, and a control unit to select a photographic mode according to a signal transferred from the mode sensing unit and to drive a camera unit to correpond to the selected photographic mode. The image photographing apparatus includes a display unit provided in the body to show an image photographed by at least one of the camera sections.
